Creating a SaaS LMS and publishing it LIVE

- ilmdiya.com is a SaaS LMS portal for schools and academies
- Website, then VPS, then Live, for real institutions to use
- Value: a school gets a ready branded portal, no need to build software from zero

Website

Front-end / User site

VPS

Hosting /
Virtual Private Server

School

Schools & Academies /
Real users

Goal: Launch live for real institutions to use →

Key Benefit: Ready-to-use branded portal, no custom software build required

Class 12, How the LMS works, Page 2 of 4

Teacher publishes a lecture in one click

Student gets a phone notification and worksheet

Assignments marked, gradebook fills itself

Live classes by Zoom or Meet

A	Name	Grade
1	Ali	90
2	Sara	85
		↓

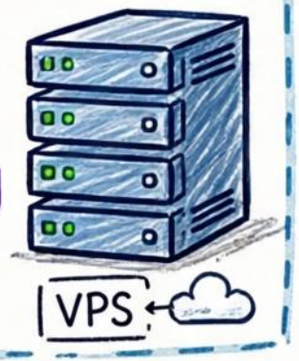

bulk import from a spredsheet

Owner sees one dashboard, bulk import from a spreadsheet

Value: work done once in one place, no chasing on WhatsApp

Class 12, VPS and live deployment, Page 3 of 4

- VPS is your own virtual computer at a hosting company

- Ubuntu is a Linux operating system, open source and free

- Domain ilmdiya.com is pointed to the VPS

- Claude finishes the server setup and points the domain

- Docker and Kubernetes are named, not taught, Claude does that work

handled by Claude →

- **Value**: control, and a non-technical founder can go live without learning every detail

Result: live & running! ✓

Class 12, SaaS model and assignment, Page 4 of 4

SaaS Service • Management

- Provider handles backup and maintenance, school only logs in

Pricing & Branding

- No per-student fee, own name, logo, and portal

Email Setup

- Professional email forwarded to Gmail → to Gmail →

Google sign-in

- Google sign-in live, teacher is owner and super admin,
- wrong secret rejected then redone

Not ready yet:

- quizzes
- exams
- attendance
- fee records
- result cards

Weekend assignment:

- make a video by tomorrow evening,
- start the application over the weekend

Sat Sun

Value: watching turns into building
